DETAILED ACTION

1. Claims 1-13, 15-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Price (#880,465) in view of Nagano. Price substantially shows the claimed subject matter including a biased element with a knife assembly 56, 57 on one cylinder. The biased elements 60 are used to hold a workpiece during a cutting operation. Price substantially shows the claimed subject matter but does not show the operation being in a folding operation. The operation of Price is fully capable of being applied in different environments, such as, a folding operation. Nagano teaches the concept of having a pinless folder for folding and cutting web material. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide Price with a folding apparatus as taught by Nagano to apply the operation in known folding operations. Regarding particular locations, such as, the location of where the biased element engages the workpiece, little patentable weight is given to location of parts unless there is some criticality or unexpected result from the location of parts. See *in re Japikse*, 86 USPQ 70 (CCPA 1950). The biasing element of Price reads on a biased bolt as claimed as it has a rounded head as claimed. The bolt is biased with a pretensioning spring.

2. Applicant's arguments with respect to claims *supra* have been considered but are moot in view of the new ground(s) of rejection.
